Dr Sprinkle

Mr. Larry Maddry
Virginian-Pilot Newspaper, Norfolk

Dear Larry:

Although we have just finished with the CBS crew on the subject of the Colts...I feel that I must "pop off in a different direction" today, Thursday.

Mt. Etna, in Italy, is sweeping a mile-wide, 18-foot-deep swath of molten lava toward farms and villages...burning up everything in its path.

This morning, 9:30 a.m., I am using both my mental power...and the Si other-dimensional power...to stop Mt. Etna, stop the eruption, stop the molten lava from destroying farms and villages. Since psi-power (ESP etc.) is not affected by time and space (or mass, I have found) then I can do this mentally from Norfolk.

Now we shall see what happens in the days to come.

Sincerely,

Ted Owens (PK Man)

Owens
Norfolk

Dr. F.

P.S. One point I should have brought up when Broun was here...which do you think...is the most powerful, Larry? A laser ray, or psi-force power? (You of course know what a laser can do.)
Answer: A laser ray, in comparison with psi-force power (which I employ), is like a tiny firecracker compared with a nuclear explosion. Or a gnat compared with an elephant. A prominent phycisist (hell, I spelled that wrong...wouldn't I make a lousy scientist?) stated that psi-force (which embodies PK, or psychokinesis) <u>may well be the fifth great power of the Universe.</u> (You can check with Otto Binder on that, and he will confirm.)
And psi-force...is what I have been, and am, and will, be using in my demonstrations.

Ted.
