Antarctic Rocks Yield Life Forms

By WARREN E. LEARY
AP Science Writer

WASHINGTON (AP) — An abundance of life has been discovered inside rocks from a barren region of Antarctica — a surprising finding that could change the way scientists search for life on Mars.

Discovery of microbes, algae and fungi underneath the surface of certain rocks in Antarctica, one of earth's harshest environments, significantly extends the known limits of life on this planet and offers new hope that some form of life may exist on desolate neighboring worlds, scientists say.

The National Science Foundation and the National Aeronautics and Space Administration, co-sponsors of the antarctic research, announced the findings Tuesday.

Drs. E. Imre Friedmann and Roseli Ocampo-Friedmann, a husband-wife team of biologists from Florida State University at Tallahassee, found life in light-colored rocks from Antarctica's Dry Valleys region, a frigid, arid area mostly devoid of ice and snow.

Similar, but more extreme, conditions were found on Mars by two American Viking spacecraft, which in 1976 searched unsuccessfully for conclusive signs of microbial life. But the unmanned craft were not designed to crack open rocks and peek inside.

Dr. Richard S. Young, NASA's chief of planetary biology, said that if Martian life exists only in the interior of rocks, "the design of the spacecraft would be influenced accordingly."

"For example, we would search out specific rock types and design a sampler which can open such rocks and provide subsurface samples which can be examined for life forms and organic molecules," Young said.

The Friedmanns have looked for life inside rocks for more than 15 years and earlier succeeded in finding living cells inside rocks from hot desert areas of America, Asia and Africa.

Friedmann said in an interview that in 1975, he found a layer of blue-green algae inside a Dry Valleys rock sent him by a friend.

"But we din't know if this was widespread and common, or if I was a freak case," Friedmann said.

In two subsequent expeditions to Antarctica, the Friedmanns brought back 600 pounds of rocks and found that dark, greenish layer of lifexisted inside semi-transcent rocks where sunlit penetrates several millimeters deep.

Drs. E. Imre Friedmann and Roseli...
Florida State University
Tallahassee, Florida

I am in possession of factual knowledge which you should have.

In the Albuquerque Journal today was an article about your work... and it states "The Friedmanns have looked for life inside rocks for more than 15 years..."

I was born in Bedford, Indiana, in 1920. When I was six years old I crossed 16th Street one evening to see granpa. Granpa Owens (John M. Owens) at that time had worked his way up from waterboy, at 15 cents a week, in the Indiana Limestone Quarries...to manager of one of the nearby limestone quarries (in years to come he became Vice President of Indiana Limestone; invented methods of cutting out tons of limestone from the ground; invented dyes for coloring the stones; many of the famous statues in Washington, D.C., came fron granpa's genius and ingenuity.)

This particular evening granpa had come home from working in the stone quarry, had washed and shaved, and was in the kitchen looking at a small white lizard which he had placed inside a container. "Look here, T.," he said to me, smiling, his pipe clenched between his teeth, "I sawed open a big block of limestone today and found this live lizard inside the solid rock in a pocket in the stone." He poked the lizard and it moved around inside the container. He went on to tell me that he couldn't understand how it could live, sealed inside that pocket inside solid limestone...and he said he figured that it must be hundreds or thousands of years old. He estimated that water managed to seep through the limestone which the lizard lived on...but without food? But it was alive, and I watched it, fascinated. It was white, with slight discolorations on it. It reminded me of a chameleon, sort of.

My grandfather John Owens never lied to me in his entire life. Or anyone else, either. He raised me...I lived with him and granma (Queenie) most of my childhood up through highschool. He was listed in the books, "Great Men Of Indiana," a 'Who's Who' of the greatest men of accomplishment in the State of Indiana.

Knowing granpa's character...I know that he found that lizard just where he said he did, under the conditions that he described.

As for me...you can secure a scientific report about me, by scientists... from Washington Street Research Center, 3101 Washington St., San Francisco, California, 94115, for $7.

Were you to go to those limestone quarries around Oolitic, Indiana, and Bedford, and Bloomington, etc., and question old timers in that area who worked those quarries in long years past...you might get some valuable information on life they may have found inside that stone, as granpa did. (Claude Akins, movie star, was a kid who attended the same highschool I did in Bedford, and his father worked at the stone quarry of granpa's.)

Cuban-Soviet Ethiopia Role Increasing?

Los Angeles Times
Washington Post Service

WASHINGTON — The White House and the State Department Friday increased their estimate of the number of Cuban troops involved in the fighting between Ethiopia and Somalia and charged that the Soviet army general is directing Ethiopian troops in an important combat area.

At separate news briefings, Zeigniew Brzezinski, the White House national security adviser, and Hooding Carter, the chief State Department spokesman, both put the number of Cuban troops now aiding Ethiopia at more than 10,000.

Two weeks ago, Secretary of State Cyrus R. Vance said there were 2,000 Cuban troops involved in a "combat role" in Ethiopia. Last week, the State Department increased that estimate to 5,000 troops.

At the White House, Brzezinski also asserted that Soviet Army Gen. Vasiliy I. Petrov "is in direct command" of Ethiopian troops, augmented by some Cubans, in the Harar region of the country. He said he did not know how long Petrov has been in Ethiopia.

Brzezinski also said that the Soviet Union has supplied Ethiopia with 400 tanks, and two MIG fighter planes. The Cubans fighting on the Ethiopian side are organizing themselves into two infantry brigades and one mechanized brigade, he said.

The Soviet Union, formerly allied with Somalia, switched sides last year after the United States cut off military aid to Ethiopia and has since poured in about $800 million in military equipment to the African country.

In recent weeks, the United States has steadily increased its estimates of Soviet and Cuban involvement in the conflict. Two weeks ago, the State Department said there were 1,000 Soviets, including some pilots, in Ethiopia.

Friday's estimates of the number of Cuban troops varied slightly. At the State Department, Carter put it at "8,000 to 10,000 plus," while Brzezinski said there are 10,000 to 11,000 Cuban troops in Ethiopia.

The Harar region, where Petrov is said to be directing Ethiopian military operations, is part of the Ogaden, an area about the size of Oregon inhabited by ethnic Somalis. Last summer, Somali forces captured most of the area from Ethiopia, which with heavy Soviet and Cuban backing is now seeking to regain the territory.

U.S. policy calls for a cease-fire in the region, followed by a negotiated settlement of the territorial dispute, the withdrawal of Somali troops from Ethiopia and the withdrawal of all Cuban and Soviet military personnel from the conflict.

February 24, 1978

Jeffrey Mishlove...this evening I saw a horrible sight. A thousand dolphins bludgeoned to death in Japan...witnesses said the dolphins cried like people, as their brains were being beaten out.

I was furious with rage. Dolphins are highly intelligent; gentle; wonderful creatures. I went to the SIs and asked permission to strike Japan with a slashing, punishing blow for this crime on nature...perhaps a bad earthquake...meanwhile telling you so that perhaps you could, through your "good offices" let the Japanese know why they were being punished, and never to do it again.

But the SIs pointed out to me...that the United States slaughtered hundreds of thousands of innocent Japanese...in its atomic attack on Japan...thus would it be fair to do this thing to Japan now?

I see the SI wisdom.

But...Japan must be warned. If they repeat their act, then the SIs will allow me to punish the Japanese.

Someone...had better pass this warning on to the Japanese.

Sincerely,

Ted Owens (PK Man)

Owens

PS... I told you some time ago the Russians would soon open up aggressively around the world. Now witness the sudden tremendous build up of Soviet tanks & planes & Cubans under the leadership of Petrov, top Russian general... in Ethiopia. The (But what the Russians really after is African west coast facing the U.S. to set up ICBM bases. Here pointed one way!)

Feb. 8, 1978

Dear Jeffrey,

Re yours of Feb. 6, 1978. Sad about Dutton. He will live to regret his decision, because a book on my work will be a best seller...with my SIs backing it, invisibly.

By all means, encourage your Ron Bernstein to go after the book idea with other publishers. Meanwhile it is my hope that your own book on ESP training will come out and be successful...and I hope that my SIs back it, for my friend Jeffrey. Am sure that it is a fine work, as was your Roots of.

The film sounds great...and of course I will cooperate to the utmost with Michael Weise.
Lynn Hershman sounds great...and if she can stand my kidding, my Indiana humor, vs. her sophisticated mind...we'll get along great.

It is most interesting...that just after 20 of your peers descended upon you re me...you are now getting away from me, and back to your own PhD work. But of course, you are right...your own personal work comes first. And remember my prediction...after you get your PhD, and you will... you will become one of the world's best scientists in your own field.

I was vastly amused...with the last three paragraphs of your first page...that I could get tiny funding...to take care of living expenses...

whilst it depended upon "completion of preliminary research projects" whether or not I advanced, financially, toward the $200,000 base money.

I had that opportunity in Frisco, while back there with you in 1977... but from others...yet you will notice that I pulled out, broke...and underwent severe hardships to get here at this tiny spot in New Mexico.

My SIs have given me strict orders...to tread water, so to speak...until I get my $200,000 base to work from. Then, and only then, will I take on extra research projects...aside from the projects the SIs give me. If I have to wait until Russia attacks the U.S. and wipes it out, then so be it. No base, no performance. Reminds me of a trained seal, given tiny fish as a reward when it does its tricks. Not for m,e, or for the SIs.

Jimmy Connors, numerous pro football stars, numerous basketball stars, numerous film people...can make a million dollars in a year. I cannot throw a football, wield a tennis racket, or be something I am not in a movie...all I can do...is control cities and entire countries and military exercises on a large scale. Of course, my ability in that regard has no monetary value in today's US values.

And now the hostile attitude of govt. agencies and scientists...has driven my work underground, so to speak. The only slip I have made was to warn you and Henry...about the upcoming East Coast horror, that has transpired.

If you want to withdraw from the stage and watch, as a bystander from the wings, what happens on the stage...I cannot help that. It will not change...what happens upon the stage of time. Better, I think, for you to stay upon the stage. But...who cares what I think. Obviously no one around at the present time..

Each day that I spend here, in the nothingness of New Mexico...is one less day of magic...for the United States to have in its possession. The price this government is paying...each day...for not giving me and the SIs that base...is horrendous. But only I can see that. I will only live so long. Each day counts. What price could anyone put...on what I can do...in a day? Everything else in this silly world, with its silly values, pales into insignificance. And the SIs stand, invisibly, and watch this human comedy.

I agree with you, Jeffrey...that you put in full time on your PhD work, and your school. And I wish you the best of luck, as do my SIs.

Of course, taking into consideration the entire picture...your getting a PhD...just might become academic, pardon the expression...considering everything. What a joke, if you got your PhD...and the US is wiped out just thereafter. You know? The SIs need you, and you need the SIs, I think. Perhaps I am wrong, who knows.

If other people like Weise and Lynn Herhsman can pick up the ball from you now...well and good. As for being patient on a long-range basis...forget that. As I told you...there is no time. I have been patient for twelve years, but the rope is coming down to its end. For me and the SIs. If no one believes, that, and me, then no one would have believed the other three hundred and forty miracles, either, before I forecast them.

I knew that you would get clobbered by your peers, my friend. All they know is...cover it up and sweep it under the rug, and maybe it will go away. Ha ha. I staple your envelopes, because sometimes I have to change it.

Owens

$200,000 in a briefcase, in cash!! Just like the Korean payoff to Congressman. And $20,000,000 on bribes. What's wrong with SI [illegible] for a little bit?

Feb. 10, 1978

Dear Jeffrey...re yours of Feb. 5...make that Feb. 8...thanks for sending me the Eisenbud letter. Interesting. I see that he understands. No dope he. Wish he had not referred to my work as an 'act' in Peoria. That is the kind of disrespect from the scientific community that burns me up. In that paragraph he is correct...it would take a team of various kinds of scientists to sum up what I do...which, I believe, is what you stated in the scientific report. But he is wrong about one thing...my 'act' playing in Peoria...because I am not bending spoons or doing thoughtography...I am bending cities, countries, military exercises. There is a difference there. My psychic cause and effect...has much greater scope than the cause and effect of Serios or Geller. Simply, it cannot forever be ignored, whether or not it 'plays in Peoria', whether by scientists or government.

In his third paragraph he is correct...what psychic in his or her right mind would step out of the ring where he or she usually fights...and put their reputation on the line trying to do ballet or sculpt when they never had done so? They wouldn't be right bright to do so. It takes years and years to develop a specialty to the point where it is outstanding. In one hour, trying some other medium because they are pressured into doing so by whatever means, they can make a genuine jackass out of themselves. For the world and for scientific journals to laugh at. Let Serios climb up onto the high wire in a circus and try his luck there for ten minutes, walking across it. He would be wise to stick to what he does.
Yet I will attempt to cross the bridge. When and if I get the Oregon base, with the $200,000...and nothing less will do, in any way shape or form...I will allow Jeffrey Mishlove to set up any experiment, anywhere, with any scientist in any field...and do my best at doing it successfully for Jeffrey and his scientific friends. And there will be no question of money or fee on my part.*

I have done so many things successfully in the field of the paranormal... a regular "rainbow" of effects...and seem to be getting more and more powerful all of the time. There is no telling what I can do, now or in the future.

But there will not beany more 'stonewalling' like that of Louie or Hynek. It will all be documented thoroughly, by myself...fore and aft...win, lose or draw on the experimental work! I figured then that a personal phone call to a famous scientist would be even better than a written letter... that the call would be as good as money in the bank. Ha! How I have learned my lesson! And Louie must have breathed a sigh of relief when she learned that I had lost her personal affidavit on thePKd scissors. Ha.

What does Eisenbud mean by 'one-shot effects'? Many of my doings were multi-faceted...complex. Certainly not 'one-shot'...and many have been repeated over and over and over.

What the hell is an "aequate theory"? Why can't scientists talk out of a dictionary?

By the way...I want you to know how very very much the SIs and myself appreciate all that you are doing, Jeffrey.

* Pero, I will not be "on call" to anyone; I will do the experiments at my convenience. The Oregon Base work is all important.

Incidentally, the best thing that I can see about Eisenbud...in spite of his nasty crack about my 'act'...and obvious disrepect for the layman... is the fact that he stepped forth into pioneer territory with Serios, where other scientists feared to tread. The man obviously has guts many other scientists do not have...and there will never ever be a great scientist, making truly great discoveries...without that special kind of guts.
Wonder how Eisenbud would like me to ask him about his 'act with Serios'? Ha ha. And how it didn't 'play in Peoria.'

But in spite of being childishly irked by his crack...I have to admire Eisenbud's obvious objectivity as demonstrated in his letter. The man seems to have both fairness and depth in his thinking processes. And "he do seem to make correct assumptions."

Now for your own letter. Let's see. I will be most happy to see your first-chapter 'baby' when it is born. If you can do so, enclose two extras for Millie and George. But if you can't you can't.
I have never attempted to create living material in any form...but with SI help, who knows? Many many of the things I have done...I had never before attempted...but got it done nonetheless. Or the SIs did. Whatever.

You have hit the nail on the head. What I have done, and am doing even now...is so far ahead of its time that few people can accept it...or even understand it...and that includes scientists on the whole.

We will do the interesting, sophisticated experiments to which you refer in your fourth paragraph...AFTER the SIs and I are given our $200,000 for our base and the work there. I have outlined this adequately in the earlier part of this letter. And in yesterday's letter explained the why.

Certainly I need the $500 a month...plus a car to become mobile...plus getting out of here to a better environment. But not with strings and pressure to undergo tricks like a trained dog getting a biscuit tossed to it if and when it is successful. To a man like me, that is the sublime insult. $500 a month is a laugh nowadays, Jeffrey, aside from the principle of the thing. Try living decently and adequately with a wife and two children on your back. Ha ha ha. Wait until you get married! But even if I received a lot more money per month to live...it still would not play in Peoria. I am one of a kind in this world...and there are many like Joe Namath, Jimmy Connors, Frank Sinatra, Richard Burton, in their respective fields making a fortune, millions of dollars...and they cannot do what I can do. Would you make them the same offer? Hey, Frank Sinatra... we'll pay you $500 a month for living expenses if.... And it does not matter that 'they' have arrived in their fame and I have not. What I am is a solid, concrete fact. The SIs I had over my head last July 19, were a solid, concrete fact. They are real; I am real. And I am not that far out of show business to be really grossly insulted to have pennies thrown out onto the floor after my 'act' is over. Enough yet.

Now for the most interesting part of this letter...last night the SIs 'taught' me, as they do occasionally, while I was asleep. All night long their telepathing came at me. They gave me a birthday present (which is today). It is psychotronic form witnessed by human beings...which maintains the Life Force of a human being, or removes it! I.e., a male sees lovely legs, breasts, buttocks on a female...and this psychotronic form stimulates the male and keeps his Life Force bubbling and flowing. Same in reverse. Most prostitutes eventually attempt suicide because they are forced to

witness the wrong, ugly psychotronic form for them...of tricks for money... in essence distorting the mechanism built into them by Nature...and this, carried on over a period of time creates a cancerous, life-destroying condition in their Life Force. I hope that this is clar for you. If not, question me about it on one of your calls. Older people, who because of their fatness, baldness and obvious progressive ugliness...do not get the opportunity to keep on witnessing the naked limbs and bodies of the opposite sex...therefore the psychotronic form mechanism set up by Nature to keep life going for the human...is diminished more and more until Nature gets the message and eliminates the human with cancer, pneumonia, etc. Also the SIs taught me how to "code" thousands of humans simultaneously, as if they were one disc...think of one entire side of a football stadium being "coded" like one of my SI discs.
Also they taught me how to code the head of a human...like I would a disc.

Before closing...see the Argosy Winter 1977-78 UFO magazine. In it are two articles by Bill Quinalty. Excellent articles, you'd be surprised. Well, Bill was one of my personal pupils years ago. Came to Cape Charles. Received the very same mind-training that Millie received. And while there he actually witnessed paranormal phenomena! You might drop him a line through Argosy and check it out with him, personally. He has a brain. My last address for him was Bill Quinalty, 7712 Enfield Ave., Apt. 103, North Fork, Virginia 23505. Well, he might still be there.

Keep swinging, pal....

Sincerely,

Ted Owens (PK Man)

There seems to be one great problem! The scientists are interested only in what they want. They pay no attention to what the SI's want. This seriously needs correction!

Ted

My wife Martha returned to us... four months pregnant... from another man!

Feb. 16, 1978

Jeffrey Mishlove...dear Jeffrey...many things to talk to you about. Was a great pleasure to talkx to you for about two hours plus these past two weeks. And it is wonderful to know...that you are doing the first chapter of the book on PK Man. That book...will be the only one...of its kind. Enclosed is a clipping re a "subway coast-to-coast ride" which, unfortunately, is routed through Dallas, Texas. Now, the Dallas-Ft. Worth area is a no-no to the SIs...who have seen me framed, tricked by authorities, twice in that area. I predict that if it goes through Dallas...well, I wouldn't want to be riding on it!

This morning I forgot to tell you probably the only time I ever lost my temper fighting. It was when I fought Moose Muscio, another Navy man who before going into the service had been a professional ring fighter in New York...In Lafayette, Indiana, while I was stationed at Purdue in 1943. The Navy was using me...to bolster the Purdue boxing team...and I did quite well, being outpointed only twice in perhaps eight ring fights...and those two losses were when Purdue sent its team out of town and Jimmy Beers was the coach and I positively know that I was doped before those fights cause Beers was in with gamblers...after one fight Beers put me into a car with a beautiful hooker and told me that she was mine for the night (we were in a town away from Purdue at the time. I didn't accept her, but got out of the car.) Anyway, Moose was a really pro fighter (I was not, I was just tough and very good at boxing, but not pro.) Anyway, I came out in the first round with the boxing stance dad had taught me, and Moose nearly killed me with hooks. Hooks were something new to me at that time...I was used to straight jabs and punches, right crosses and uppercuts...but not wild hooks. But the second round I knew how to take him...just put a hand up and block the hook...then counter punch...then I nearly killed him. For two rounds, the last two, I beat Moose from one end of the ring to the other. I had special motivation because in the second round he butted me under the chin with his head, a pro trick. It split one of my teeth and for once I forgot this was a game as dad had taught me...and lost my temper... and I actually put Moose into the hospital! See, dad had taught me at age 6 never to lose my temper in a fight...because that could get me whipped. To keep cool, no matter what. And that always stayed with me, even into some of my wildest, roughest judo fights. As a pupil of Johnny Osako in Chicago in Kodokwan judo...I was slated to meet a Polish man in a randori (fight) the next Friday. But days before that Johnny was teaching us how to beat someone who had me up against a wall strangling me...and double chop him with karate chops. He picked the Polish man to work with me...I stood against a wall and the Polish guy was supposed to put both hands around my neck and choke. I was supposed to come up with both my arms between his hands, split his hands apart, then in the same movement come down with my two palm edges against both sides of his neck. Instead, the Polish guy crossed me and Johnny, and threw a kick-back into me...which was uncalled for. This threw me into an angle of the wall and sprained my back severely. I picked myself up and told Johnny that I'd break the Polish guys arm for that in the oncoming match. I went into the randori that Friday against the Polish guy...threw him with a kickback...he retaliated with a circle throw...then I got him with another kickback with a choke hold...and nearly ruined the Polish guy. But one thing was wrong...Johnny told me that I was GROWLING like an animal...and took the match away from me even though I beat the Polish guy...and incidentally, broke his arm. Of course, I used autohyp in my judo matches...and I'd told myself under auto that I'd have the strength of an animal. One jap blackbelte I fought...I tore part of his jacket off with my bare hands in the bout...and he told me afterward he'd never before ever encountered such hand strength. Thanks to autohyp.

Oh, thinking back...if you wonder how Beers drugged me, his best fighter, before every out of town fight he'd make us drink hot tea, have a slice of toast and a boiled egg, then lie down for a brief nap...before the fight. It was the tea. Later, after I figured out why I was winning every fight at Purdue...but had lost two bouts out of town...I challenged the coach, Beers, to get into the ring with me (he was a Golden Gloves champion) and he refused. Scared witless. He actually got into the ring for a moment... then when I went after him he jumped out and took off his gloves and left. He was smart. I'd have racked him up.
Oh, Johnny Osako told me later...after my fight with the Polish guy...that it had been one of the very best judo randoris he'd ever seen. And a detective who worked out with me in Johnny's judo class...Al Valanis... a blackbelt...was the INVENTOR of the modern system of making composite photographs of criminal suspects. He was an artist, and invented the system.
I called Henry today...and told him to get back to you, as you suggested. Now, for the proposition I phoned in to you...send somebody xxxxxxxxx to me with a briefcase with $25,000 in cash...I will buy a $12,000 sports car and rent a small U-Haul...and bring out to you all the tremendous files from 1965 to 1970, which you don't have...to xerox...plus do all the experiments you want done, in your letter. Cyclotron, etc. Will spend months there, if necessary, getting it done. This procedure, of course, means nothing to the SIs, whose war will still continue with the U.S. until they and I get the Oregon base. Or...give me that Oregon Caves setup with the hotel and five or six cabins nearby, and the deep cave nearby...plus $100,000...for one year...seal off the usual tourist trade...and I can demonstrate in that year how the SIs can really HELP the United States (worth billions in dollars! lots more than the money taken from that Oregon Cave set up from tourists.)
Why not send your scientific report to Johnny Carson and Merv Griffin... they might have me on their show and I'd get some eating money.
This morn I got off to you the color photo of Milan Ryzl and myself, plus my personal file. Be sure and let me know if you get it...since the local postmaster is crossing swords xxxxx with me...then return it within two weeks, if you will be so kind, as it is key to my file. Keep the photo, of course. Or copy it & send it back, hopefully.
If I haven't followed up my phone predict to you in writing re Pres. Carter.. I predict President Carter will not finish his term. He will "blow a fuse" in his mind...and will not be physically able to continue. Mondale, in his footsteps, will be far superior to Carter, as a U.S. president. This is pure precog...has nothing whatever to do with me or the SIs.
Also I predict...that the Russians realize that the backbone of the US fighting power...as it is with US sports...lies with negros in the US... and the Russians will soon open up with a tremendous spy program aimed at turning American negros against US whites...for a revolutionary effect.
Oh yes, if and when I do those experiments that you have outlined...I reserve the right to decline any experiments that I feel could be dangerous to me or detrimental to my mental or physical health. I only really trust two scientists...you and Henry Monteith. Henxry might front for these stupids, generals and scientists ridiculing me in this area...but Henry will not tell me a lie, no matter what. He's already demonstrated that. He has my confidence.
Please return the snapshot I sent you two weeks ago of the dope addict and psycho who could turn up at this post office, gunning for me, any day.
I also picked up the thought from someone who received it there where you are..."maybe it would be better if this nut got Owens."
You know that "UFO voice" that came over television in England? Well, it happened after I and the UFOs told George Weiss over there that the UFOs would punish Queen Elizabeth and England.

Incidentally, you recently asked me if I were making PK maps to clobber the US as it is being clobbered, from coast to coast. No, I am not. The SIs are doing it on their own. However, I do not make PK maps anymore. That is obsolete now. The SIs have shown me how to do it, and confine it to, my mind, mentally. This parallels my talk to the scientists in London, England, in 1977. I explained the "how" of that, there, in September '77. The SIs asked me to drop this in: "If there is going to be performance on the part of the UFOs (to help the United States)...there will have to be performance on the part of US humans (to help me, their link to the human race.)

Am still laughing at that $500 per month. It's what a lousy secretary makes. I made that in Houston over twenty years ago as a secretary to Nickel Plate Railroad.

Also, I have no energy. I have only the energy to make one, single move. For a man 58 years old, which I am, it wipes you out to have to get all belongings in a house or mobilehome into a U-Haul and to a new location, then unload it and spread it all out in the new place. No thanks. One more time. That will be to the Oregon base!

If "they" want a psychic...who can do, demonstratively, more than any other psychic in the world...then LET "THEM" PAY FOR IT!

The SIs have warned me...not to let anyone, not even a friend, cart off my personal files of documents...but for me to stay right on top of them. But of course, certain hundreds of the documents can be selected, then xeroxd, with me present. Same difference, right?

Thought...stupid ass Billy Carter gets $5,000 per lecture...and he's booked solid. Why couldn't I get booked around the US for a year, and I'm the only one of its kind, not a Billy Carter...for thousands per lecture...to get the money for my Oregon base? On second thought forget it, the U.S. hasn't the time!!

Thought...either I have a precious, priceless value (as is a fact) at $200,000 for the Oregon base...or I am a worthless nothing at $500 a month!

Once more I reiterate...remember...as I go, so goes the U.S. The SIs have promised this. And...if I am killed, murdered or destroyed before my time to go...the SIs absolutely guarantee and promise to wipe out the United States en toto!

Thought...it isn't exactly that I, as a human, am so far ahead of my time... but the SIs have changed my brain to give me the brain of "future man" as I explained to you in Frisco.

That's it for now. Keep swinging. I am 100% with your dad. Hope he got warned enough in time to forestall something, re health. His photo worried me, Jeffrey. But I am all for his unloading his white elephant, and soon!

Best to you, always.....

UFO War

Physicist Says 21-Minute Coast-to-Coast Ride Possible

WASHINGTON (UPI) — A transcontinental subway ride in 21 minutes? That's the proposal of a Rand Corp. physicist who said it really isn't as far-fetched as it might seem.

"In order to gain proper perspective, it is instructive to look back over the last 100 years in transportation and see how far we've come," Robert Salter told a meeting of the American Assn. for the Advancement of Science.

His proposed system is still just in the idea stage. But he said there's no reason it shouldn't work, provided the $250 billion-plus cost can be met.

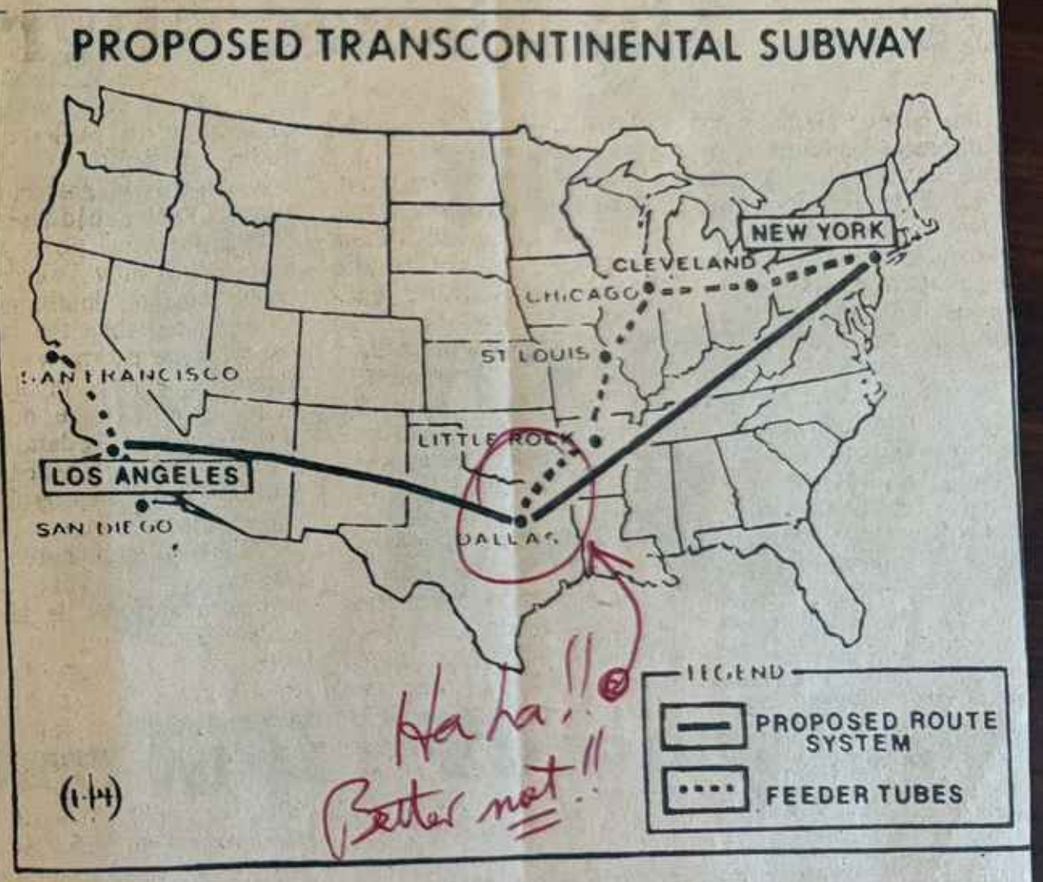

Salter calls the concept "planetran." It would send 200-passenger cars zipping across the country up to 14,000 miles per hour in underground vacuum tubes, riding a wave of magnetic fields as a surfboard rides the ocean waves.

At top speed, the super subway could make the Los Angeles-New York run in 21 minutes. But to avoid acceleration forces that would increase your weight by 40 per cent, he said it might be desirable to hold the speed to 6,000 mph. A cross-country trip then would take 54 minutes.

Salter's proposed route system would have the main line running from Los Angeles to Dallas to New York with feeder tubes between Los Angeles, San Francisco and San Diego; from Dallas to Little Rock, St. Louis and Chicago: from Chicago to New York with a stop in Cleveland and additional spurs in Texas, the Midwest and the Northeast.

He said the planetran would connect with existing subway, rapid rail systems and airports. Aircraft would cover areas of the nation not linked by the super subway.

Salter said the bullet-shaped planetran cars would be much more efficient than airplanes. He estimated the coast-to-coast energy cost for single planetran passenger would be $1.

Feb. 22, 1978...Jeffrey...several weeks ago Beau did something he had never done before...he just vanished for five hours. He left at 3 PM to go up into the nearby mountains with his BB gun...hadn't returned by dark (a first for him) and by 8 PM I called the police. Then I went out into the isolated area in the dark looking for him. An hour later I returned home to find him there. He'd just returned. (While looking for him I saw 3 UFOs quite plainly overhead.) Anyway, he said he'd gone up into the mountains and started back at dusk. He found the enclosed hair in a bush...and thought it so unusual he kept it. Dark now, he somehow "got lost." Meanwhile a helicopter shined a spotlight around him. And he says a "bird" kept flying over him and following him. Ultimately he said he found himself in a town 15 miles from Bernalillo. He turned back into darkness, reversed his path, and found his way through the darkness across the mountains back to Bernalillo. On the way he says he ran down a hill into the side of a cow, and frightened it. To me, it sounds as if the SIs had him for a while...gave him a cover story in his mind.
Enclosed is a card of notes, with two key people you could contact for more facts about me, if you want. One was Ensign Somers, of Brookline, Mass., for whom I worked at the Naval Electrical School at Purdue, Indiana, in about 1943. The other man is Lt. Harry Browne, legal officer for whom I worked at New Caledonia from about 1943-1945. I called you last week re these notes...left a message for you...but you didn't return the call so I figured you are quite busy on your work.

Ted Owens
