Dr. Hynek
Dr. Sprinkle

Gentlemen:

Columbia Studios (Mikels) is considering doing a movie based on my experiences. But first...they are going to pay me a fee...to fly out to California and try to give a live demonstration with UFO's, for them to photograph with movie cameras, etc.

Since I make my living working with and for UFO's...just as you do in the field of astronomy...and the field of psychology...a fee is in order.

Now, I am writing you...not because I want anything...but because I figured that possibly I could do you a favor, since you two have proven to have objective, open scientific minds...instead of narrow, closed scientific minds.

If you would like to have someone you know, come along when I give this experiment-demonstration...then I will allow it. I am going to hand-pick who goes along on this 2-3 day junket into the isolated countryside; and I am going to pick the location for it as well. In short...am going to go all out...to make this a really bang-up demonstration. It is an odd fact...that never, repeat never, have I ever failed to bring a UFO out into plain sight...on one of these demonstrations! Best example, of course, of this...was with Mr. Ed Ames, the realtor, in Brewer, Maine...when I told him I'd bring one out in two weeks over Brewer-Bangor area, and had to be reported in the papers...and brought one out in exactly one week which scared people, knocked out car lights and radios, etc., and was reported on the front page of the paper.

And just to do the job right...I will also endeavor to bring out a "big-foot" giant, and/or a "mothman", to be photographed. Of course, I'll also try to get a UFO down where we are...but have never been able to do that yet. But when the Si's and I operate together...anything at all can happen.

Of course, there's the chance that for the first time nothing will happen. But that's the chance we take. All I can do is try...and do my best. My best has been good for miracle after miracle after miracle...through the years and still going strong.

This demonstration will not be to try to win any prize of money for "tangible evidence of outer space" etc. The demonstration will be so that the movie people will be able to get good film footage for the movie coming up...which movie will please the Si's. (My Si's are not from "outer space" anyway, but another dimension. And they are about as "intangible" as it can get.) So far I have dealt with their <u>powers</u>...not their tangible forms or tangible craft.

Anyway, for whatever it is worth to you...there's the offer on my part to try and hand you gentlemen something in the way of information, concrete information, on the Si's in a more direct manner than heretofore (i.e., not affidavits, etc.)

Owens (PK Man)

March 6, 1972

TO ALL CONTACTS

Last week I called the editor of the Baltimore Sun...to give him some important information. Unfortunately he did not know me, he said...nor my work...and his manner was insolent and insulting (to me), it seemed, anyway). In exasperation, I finally did something I have never done in my life...hung up on him.

I have thought on this...and have reached a decision. That editor needs to be taught a lesson, somehow. The Baltimore Bullets pro basketball...that's his home team. Same with the Baltimore Colts.

From this time on...I will crush the Bullets and the Colts, with my powers. (If you will note, the Philadelphia 76'rs, with a brilliant team...have been beaten down once again, this season. Same with the Phillies. Same with the Eagles. I never quit.)

Now, the playoffs...championship playoffs...are coming up soon for the Baltimore Bullets. I'll use all of my power to make sure...that they do not get anywhere. Specifically...I'll work, play by play, game by game...to make them miss their baskets, and be off-timing. Nervous and off-timing.

Of course...I did this to them last year, quite successfully. I even wrote Gene Shue and told him there would be no use for his team to suit up for the remaining four games...because I'd make the Bullets lose. What happened? They lost them all!

I'm not infallible; not always successful; but I do my best. And my best...usually is good enough!

The Bullets and the Colts...are sunk. As of now.

TO MY SIX SCIENTISTS

(I am late getting to this...because of so many things happening to me since January. However...better late then never.)

Some years ago...I ended the East Coast Six Years Drought, and the 2-year killer drought in India...after first going on Jack McKinney's "Night Talk" radio show, WCAU, in Philadelphia, and announcing my intent over the air. (Then backing it up in writing to my contacts of that time.)

I have just done it again. (See New York Times newsclip attached: "KENYA: THE DROUGHT ENDS"

In Brad Steiger's book, "What The Seers Predict For 1972", Lancer pocketbook, on page 140... is the following (in the chapter devoted to my work):

"RAINS IN AFRICA"
"In Africa the rains will come and fill up the empty rivers, streams, and water holes where wildlife go to obtain their water. I have set this up in 1971, and the PK should be working up great power for this in 1972."

That's three times now...I have documented such a major happening in advance. Isn't that wonderful coincidence?

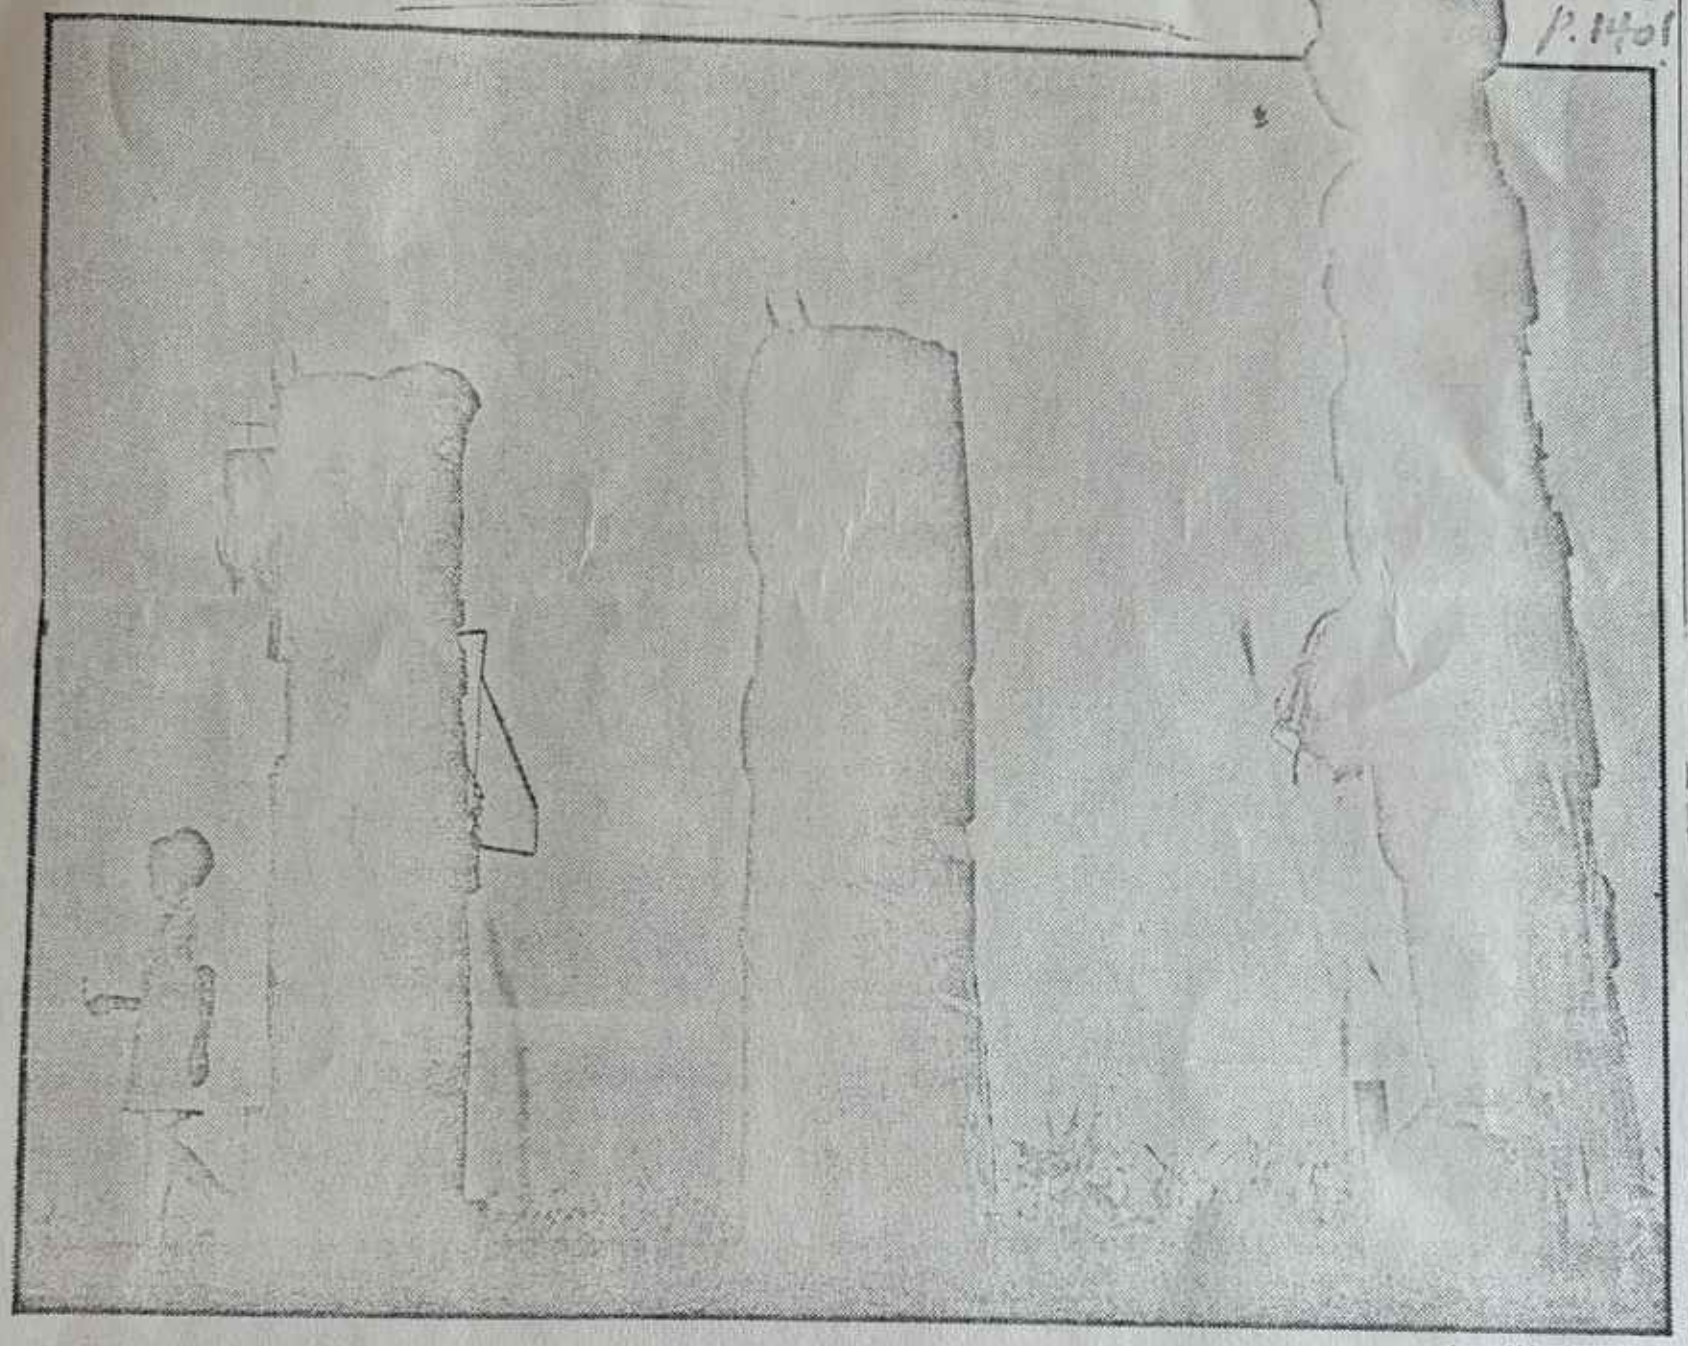

Best....

Kenya: The Drought Ends

Argus Africa-Photo Trends

In addition to wildlife parks, tourists in Kenya can view "woodhenge" figures done in Kigangu style, at Kenyatta College. Tourism, major money-maker for Kenya, is improving.

NAIROBI, Kenya—Marked economic improvement is the hope for Kenya this year after some setbacks in 1971, including a drought that lasted for many months.

Two major factors are expected to figure in the rosier 1972 picture.

The first is Kenya's decision to peg her currency to the dollar. This move, taken along with the Governments of the partner states of Tanzania and Uganda, is expected to afford greater leverage in both domestic and foreign monetary transactions.

The second important factor in Kenya's economy was the ending of the long drought, which had retarded agricultural production. Farming accounts for 70 per cent of this East African country's economy.

Kenyan farmers' incomes declined in 1971, while rising prices in industrial countries led to an increase in import prices for Kenya.

Informed sources here said that because of the drought, it seemed likely that the country's 1971 growth rate would turn out to be below the 7 to 7½ per cent it has averaged since 1964.

Agriculture may continue to be hampered to some extent this year, but investment in manufacturing continued steady last year, and some experts believe it will be strengthened by measures to replace imports with domestically made goods.

Kenya's agricultural staples have long included coffee and livestock products, including meat, hides and dairy products. The country produces tea, sisal and a variety of other crops.

Tourism, a major earner, is on the upswing, based on the attraction of Kenya's spectacular wildlife and game parks.

The prospect of more American tourists raises particular hopes. The average American visitor spends about $42 a day compared with about $25 for the average European.

Kenya's main trading partner is Britain, but she has trade and aid links with a variety of nations.

Imports from the United States are likely to increase, because the pegging of the Kenya shilling to the dollar has made the pound sterling more expensive.

American investment in Kenya is estimated at between $90-million and $100-million, mostly industrial — in petroleum marketing, canning, battery manufacture, tires and bottling.

Economic relations with other nations include substantial imports from Japan.

The country's most serious economic problem is rising unemployment, and the challenge of creating jobs is expected to grow as the population, now about 11 million, increases.

Although Kenya's balance of payments position at year-end was described by the Government as "very healthy" and foreign-earnings prospects for 1972 "very good," a serious long-term problem was brought to light in December—the need for proper land usage.

Parts of the National Report on Human Environment were published and one of these dealt with the country's soil-carrying capacity.

Four-fifths of the country is arid, thus limiting the area that can produce food surpluses and cash crops for export.

With one of the highest population growth rates in the world (3.3 per cent a year), some of Kenya's areas with fertile soils are reaching their carrying capacity and some — notably in western and central Kenya — have already exceeded their carrying capacity.

Seawell Succeeds

3/23/72

Halaby Quits Pan Am

NEW YORK (AP)—Najeeb E. Halaby resigned Wednesday as chairman and chief executive officer of Pan American World Airways and was succeeded by William T. Seawell, a former Rolls-Royce executive who became the airline's president last November.

Halaby had no immediate comment on his resignation, which came at a Pan Am board meeting which had been advanced two weeks from its scheduled April date.

The resignation came amid speculation that Halaby might have differed on policy matters with Seawell, the 54-year-old chief operating officer of the airline, which is the nation's biggest international carrier.

Halaby, 56, was named president of Pan Am in 1968, chief executive officer since 1969 and chairman since last May 5. He had been both president and chairman until Seawell was picked last November.

Pan Am also said Wednesday that it sustained a net loss of $10.9 million in February, a bigger loss than the $7.7 million deficit in the same month a year earlier.

The airline has listed losses every year since 1969 and reported a deficit of $45.6 million in 1971, compared with a loss of $48.5 million the year before.

1969... when I first used PK on Pan Am, then FBI came to our office!!

TO MY SIX SCIENTISTS.....

This Pan Am PK case...parallels the Phila. Eagle PK Case...if you will notice. I hit the Eagles with PK...this was written up in the papers by McGinnis (Who later wrote the best-seller, "The Selling Of A President)...then the Eagles proceeded to lose their games; players got injured way past the usual percentage; the coach Kuharich got fired; and the owner, Jerry Wolman...worth over 50 million on paper...went bankrupt.

In the Pan Am action the Si's told me in '69 to write Najeeb Halaby personally and ask him to finance my work with them, and if he would not...then they, the Si's...would take action against Halaby and Pan Am. This was written up in the Norfolk paper by Maddry...and two FBI men came to the office where I was working to question me. Following this all sorts of peculiar things began to happen to the 747's. Attached are some of them. I documented one particular thing I did, personally, concerning two of them. Anyway, what has followed... has duplicated exactly the Phila. Eagles' pattern. From my start in PK'ing Pan Am...they've begun to go broke (see clip above). And to top it off, Halaby himself is out.

These things have not been done by the Si's and I for purely malicious or frivolous purposes. The Si's have been trying desperately to get someone, somewhere, to financially back my "research" with UFO's. When they would not, then the Si's used them...for demonstration purposes.

Phila. Unbelievable (His team wouldn't play... or?)

76ers' Ramsey Resigns

Quits Following Final Defeat

PHILADELPHIA (AP) — Jack Ramsay, coach of the Philadelphia 76ers, resigned Sunday after his team lost its final regular-season National Basketball Association game to the Golden State Warriors, 116-115.

"For the best interests of all, I am withdrawing from the situation," he said.

"My premise on playing is that my team play as hard as possible for as long as possible. This team did not reflect my philosophy."

Ramsay, 46, said he still wanted to coach.

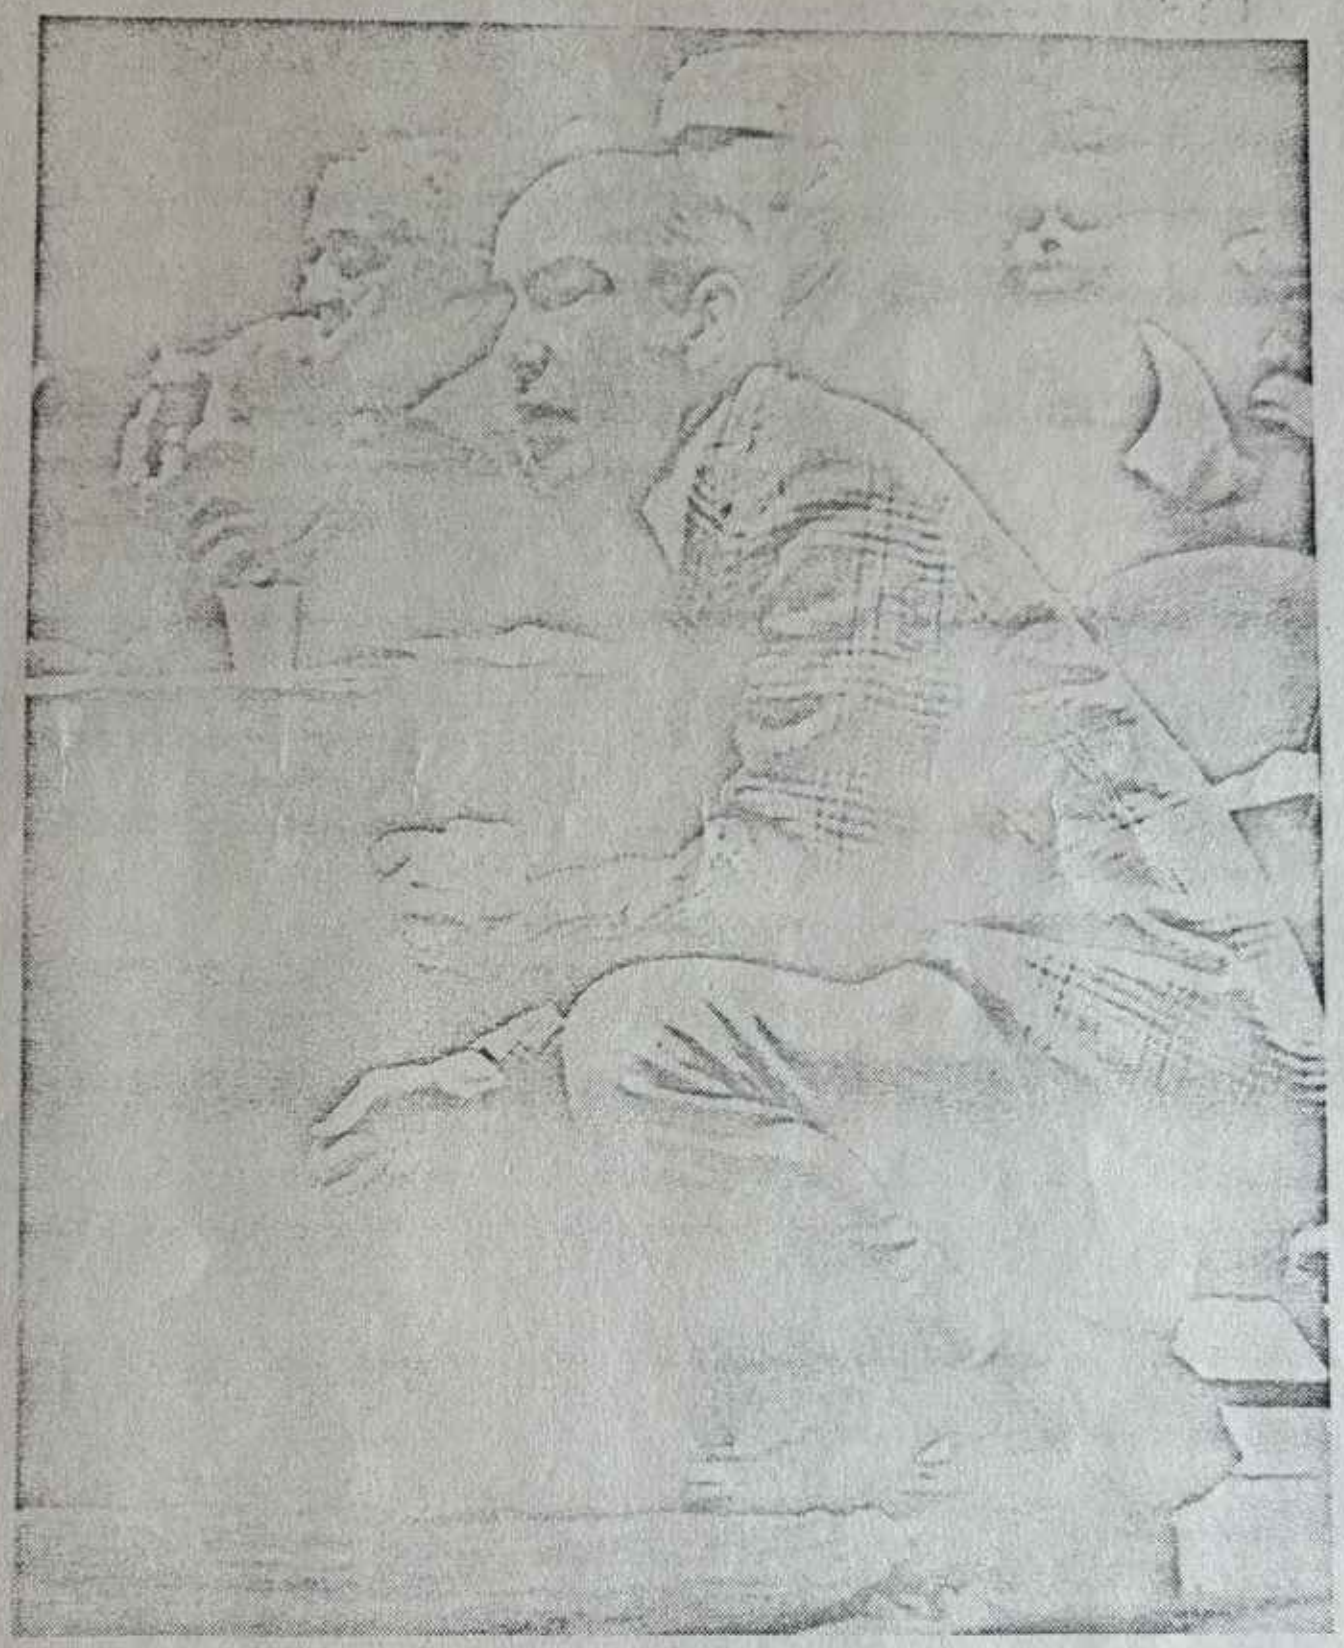

"If a geographical move is necessary," he said, "my family is prepared to make it wherever it may be. I will wait to see what develops."

Ramsay, who had one year remaining in his contract with the 76ers, said he had no problems with the team's owner, Irv Kosloff, or with general manager Don DeJardin. He said he told DeJardin Wednesday of his decision to resign.

76er Coach Jack Ramsey Sunday

. . . watches team lose, then says farewell

CONTACTS -- Some years ago I "hit" these Phila. 76'rs with PK...along with the Phila. Eagles and Phillies. Since then...none of these teams has been able to do much...except cripple through their season. The smart players...left. Chamberlain, Chet Walker, Archie Clark, etc. At last Ramsey has gotten smart, and left. Who will be the new coach of this jinxed team?

For your interest...am now doing the same thing with the Baltimore, Maryland, teams...that I have been doing with the Philadelphia teams. Two cities...utterly "jinxed" sports-wise!

Ted Owens (PK Man)

Owens

2nd, 3rd From Boat

Bodies Recovered

PORTSMOUTH—The bodies of two men who were aboard the ill-fated oyster boat Betty Ann II were found Sunday about 20 miles south of the mouth of the Potomac River where a third drowning victim was found Saturday.

A Coast Guard spokesman here at the 5th District Coast Guard headquarters identified the two men as Lloyd Stevens, 67, and Charles Stevens, 21, of Chestertown, Md.

The body of Kenneth L. Stevens, 44, the son of the eldest victim and father of the youngest, was found about 3:10 p.m. Saturday by the pleasure boat Mary Ann between Smith Point, near the mouth of the Potomac, and Tangier Island.

All three bodies were wearing life jackets.

A Coast Guard HU16 twin-engine seaplane located what looked like two life jackets off Windmill Point early Sunday afternoon. An air-cushion vehicle was dispatched to the scene and found the two bodies, the spokesman said.

The Betty Ann II left Newport News Thursday enroute to Rock Hall, Md., the Coast Guard said. An initial medical examination of the body found Saturday indicated that Kenneth Stevens probably drowned Friday, according to the spokesman.

"We still don't have any idea what happened to the boat. We have found some debris, that could have come from the boat, in the area where the bodies were found," the spokesman said.

3/6/72

TO MY SIX SCIENTISTS

I believe this is a most important letter to you.

First, see Brad Steiger's book, "What The Seers Predict for 1972", at your bookstore, Lancer Pocketbook. Chapter on my work. P. 140, part of my chapter..."Mysterious Forces from Bodies of Water...The Si's have ordered humans to stop polluting lakes, rivers, streams, and oceans within three months time or they will have the bodies of water -- which carry a combined intelligence which humans know nothing about -- attack human beings in their own way. As of this time, the governments have done nothing, so you might expect all sorts of things going on against humans coming from bodies of water in 1972. This will not be a good year to go swimming, fishing, or boating. It could cost you your life."
Note above...I said the Si's would have the bodies of water attack! I.e., this would be Si-caused phenomena! Now, examine these newsclips on p. 1, 2 and 3. These came from the papers of yesterday and today only. All of these did! Why? To get my attention...so that I would notice it, then write to you.
Now, the bombshell is p. 3, great wipe-out in Man, West Virginia. You will recall, from past correspondence (and stated in Binder's Saga articles also)...that I claim the UFO's "talk" to us...by having things happen like the long string of police cars that followed a UFO for a hundred miles, a few years ago...it even slowed up so the police cars could catch up with it, when it got ahead...and it led all those police cars to a town called Freedom (in Pa., I believe.) They were saying...in this way...that they could lead us humans to freedom. Now, on p. 3...you have yet another message from the Si's...they are saying, "This destruction is coming to man (mankind)(Man, West Virginia...name of the town) because "man" is not listening to us, or cooperating with us, or Owens, our go-between."
In essence...the Si's, then, are talking to us in a way we can understand.
Remember the case of the Michigan Monster...that put out a giant hand and stopped a car going 50 mph? It reached in, grabbed the girl driver by the hair (while the girl's mother jumped out the other door and ran) and gently, very gently, bumped the girl's head against the side of the car. It did not harm the girl. And the girl's maiden name? Owens. By doing this...the Si's were sending a talk message... that with all of their power (the Michigan Monster could have crushed the girl's head like a soda-cracker)...they mean no harm; intend no harm. That was the message and they way they sent it at that time...and I got the message clearly. From Owens to Owens. Think of the ingeniousness of it! It had to be done just in that manner... to a girl named Owens...and be reported in the papers...so that I'd see it and understand and relay it on to humans.
In deliberately turning loose the dam onto Man, West Virginia...the Si's are telling us that they, not we...control our water supplies. They control our oceans and our seas. And that they are getting impatient about the whole thing.
The urgency...of our cooperating with the Si's...cannot be stressed in strong enough terms!
What they want now...is for me to be placed, to live, on the Mayaguez-end of the island of Puerto Rico (the corner of the Bermuda Triangle) so that they can reach me more easily, thus communicate in an easier fashion. My present location almost voids the kind of contact they want with me. And it is my conviction that they will raise hell...until they get what they want.

P.S...This decoding and mailing is costing me dearly. Send help if you can.

—Owens
(PK Man)

All Safe As Turkish Ship Burns

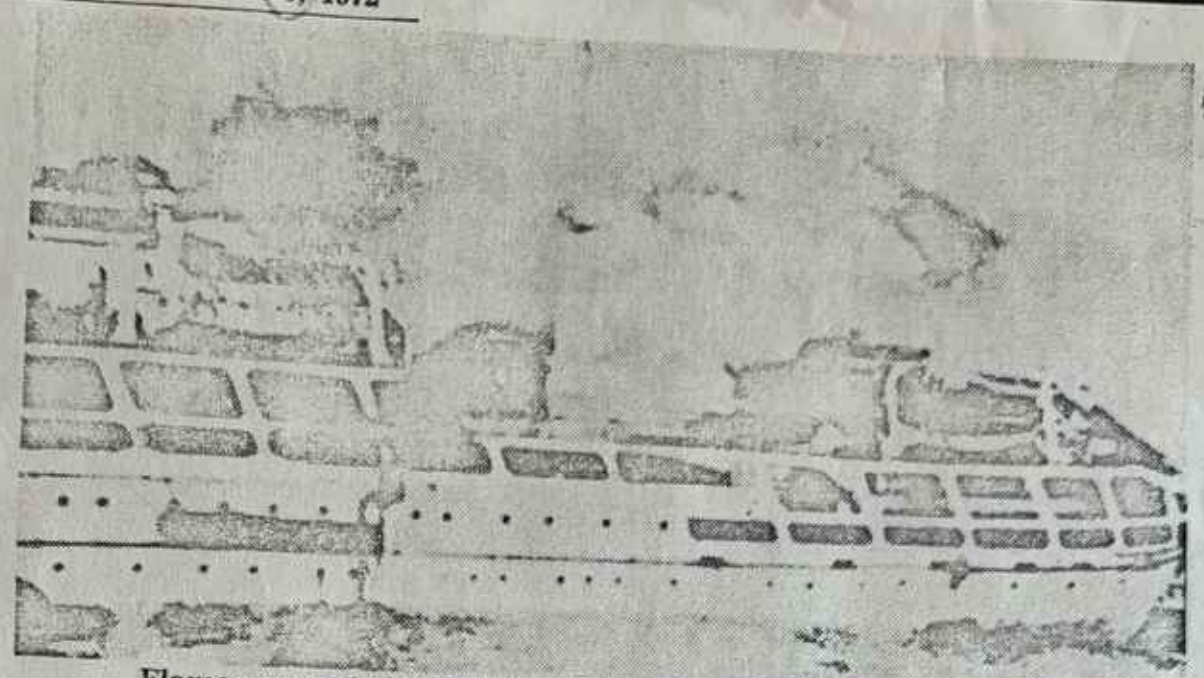

ISTANBUL (UPI)—The 6,000-ton liner Marmara, (one of Turkey's most luxurious passenger ships) burned and sank Sunday in Istanbul's Golden Horn harbor while waiting to dock for repairs.

Fire department officials said all the crew were rescued and there was no loss of life. The vessel carried no passengers.

Istanbul's entire land and sea firefighting force fought the blaze for eight hours and managed to avert an explosion that might have ignited nearby vessels and shore-based fuel dumps but could not save the liner itself, a fire department spokesman said.

"We lost the ship but Allah was with us and we forestalled a situation which could have been worse than tragic," the spokesman said.

The cause of the fire was not immediately known he said.

Flames spread through the Marmara before she sinks. (UPI)

A Light Stanc

By PAUL RECER

GALVESTON, Tex. (AP)—A tiny light, spearing the darkness with tireless winks, stands a lonely vigil 50 miles offshore in the Gulf of Mexico.

Below that light—90 feet down in the clear blue of the Gulf—lies the twisted and shattered remains of a tanker.

It was the V. A. Fogg, a 28-year-old vessel which once enjoyed a reputation as one of the finest ships of the U.S. tanker fleet.

Men enjoyed working its white decks. In a dangerous trade where workers often move from vessel to vessel, the Fogg was a favorite, with airconditioned quarters, and well-maintained machinery.

"It was one of the best," says a man who knows tankers and operates a competitor.

"That's what's so puzzling about how she went down. It's almost like it was an act of God."

On Feb. 1, the Fogg was in Freeport, ridding herself on the last of a large load of benzene, by [illegible]ing it th[illegible] umn of smoke rising through a dense cloud bank below him. He reported it by radio.

The Coast Guard was alerted, but a search by aircraft revealed nothing and was canceled.

The next morning, Feb. 2, officials of the Texas City Tankers Co. were becoming worried. The Fogg had been due in Houston at 2 a.m., but had not reported. Nor was she answering radio-telephone calls.

Shortly after noon, the company formally declared the vessel overdue and notified the Coast Guard. There followed a massive search by ships, airplanes, and helicopters which lasted 11 days and ended in failure.

Then, Joseph D. Cheavens, 31, Houston, attorney for the shipowners, checked a tape recording of conversation between the test pilot and a control tower. In it he found a location which was miles from where the Coast Guard had searched.

The company hired a ship [illegible]

Hovercraft That Killed 4 Goes Under

PORTSMOUTH, England (AP)—A 10-ton hovercraft which flipped over onto its back in Portsmouth harbor during a gale, killing four passengers, sank Sunday alongside a Royal Navy repair ship. A salvage attempt will be made.

The vessel, which plied between Portsmouth and the Isle of Wight riding on a cushion of air, was just coming in to land late Saturday (when a big wave lifted one side and high winds tipped it over.

Twenty-two passengers and crewmen were saved, but a man, two women, and 7-year-old Julie O'Connell were trapped inside and died. Julie had always wanted to go for a hovercraft ride and she was taken on a round trip by a friend as a special treat. The friend was saved.

Temporary restrictions on hovercraft operations, including a speed limit of 30 knots, were imposed by Hovertravel, Ltd., owners and operators of the craft which turned over. The restrictions will remain until an official inquiry is ended, a spokesman s[illegible] d.

Soviet Ships Hover Near Disabled Sub

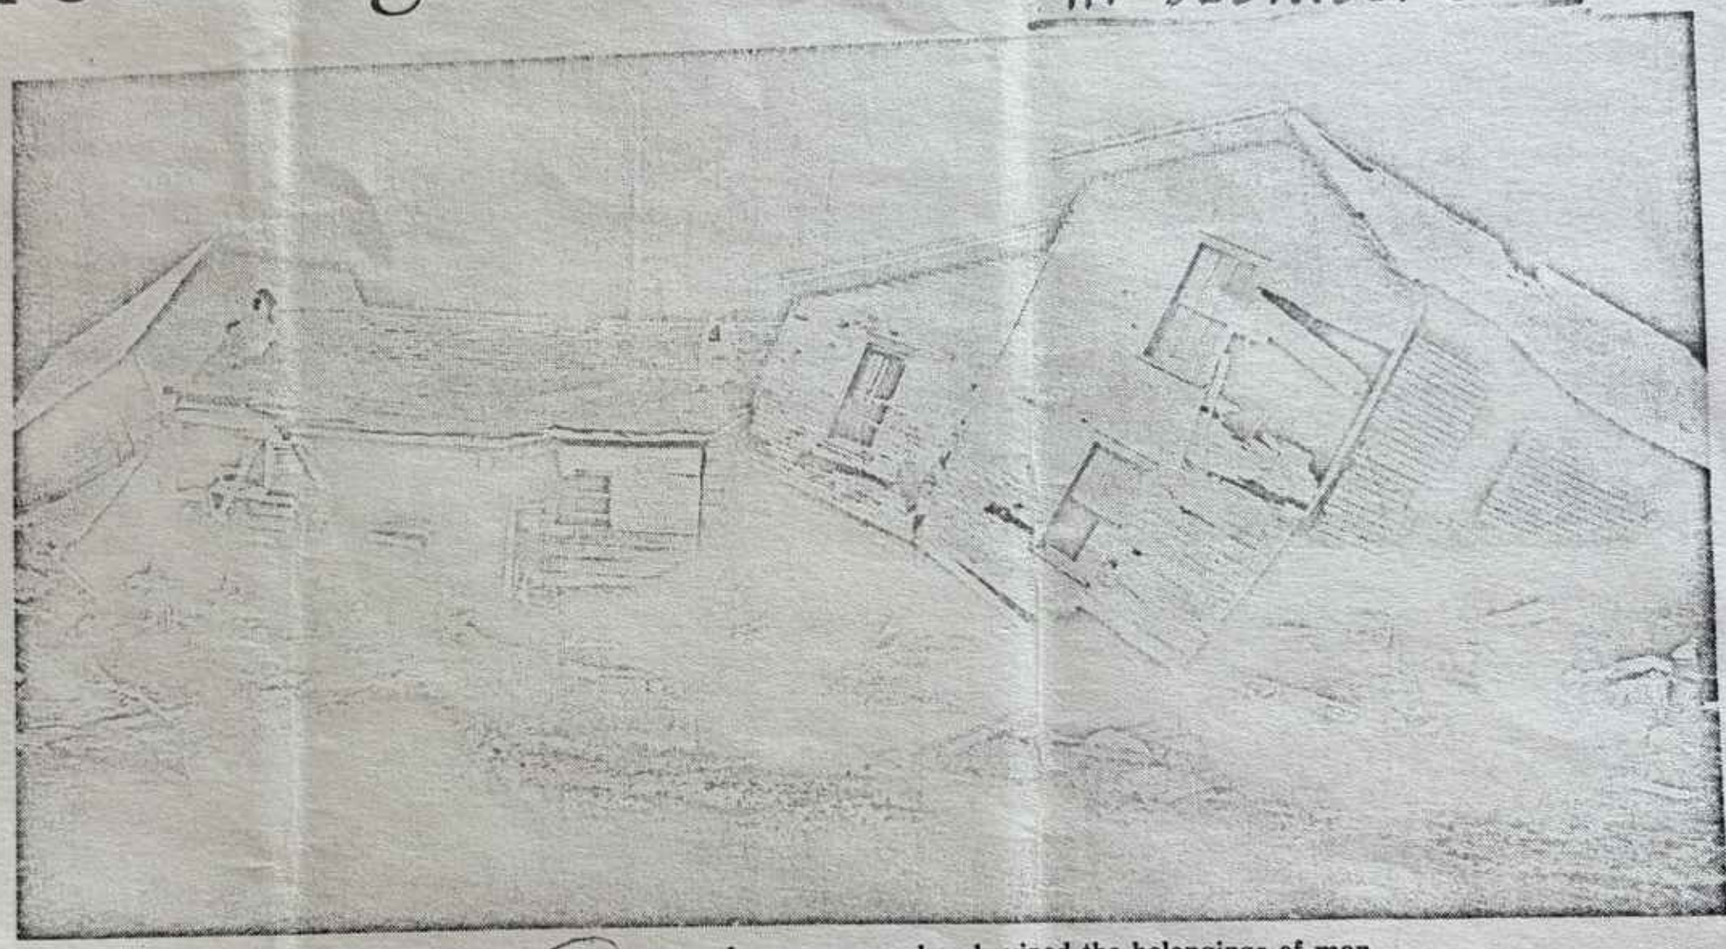

WASHINGTON (AP) — About nine Soviet ships hovered around a disabled Russian missile-firing submarine Saturday as the sub continued to drift in the stormy North Atlantic eight days after it broke down.

The Navy reported that two long-range Russian patrol bombers droped 23 packages to the submarine by parachute the second such resupply effort since mid-week.

The H Class submarine, which carries three 650-mile range missiles, was reported drifting about 900 miles east northeast of Newfoundland amid waves running up to 15 feet and intermittent snow squalls.

A Soviet submarine tender was observed Friday by NATO patrol planes based on Iceland when the sub tender was about 400 miles northeast of the sub and on course toward it.

A Black Onslaught of Water Bathed a Land

At a place called Man, nature has rearranged and ruined the belongings of man.

The Living Stir Around In the Mud

By BEN BEAGLE
Landmark News Service

MAN, W.Va. — James Brunty's name was the first one on the typed sheet taped to the glass of the trophy case at Man High School. It didn't say much about James Brunty; only that he was deceased."

And the list had 71 other names on it five days after James Brunty died in a rush of black water that did incredible things as it washed down 12 to 15 miles of Buffalo Hollow.

The water took Daryl Kay Dillard, too. The list was a little more specific about Daryl Kay. They had put "little girl" in parentheses beside her name.

It didn't say whether they had lived in Pardee or Craneco or Lundale or in any of the more than a dozen coal towns which had been strung out like an unclasped necklace along Buffalo Creek.

The thing that turned Buffalo Creek into a killer was a dam, a coal company slag heap dam, which had held back for a long, long time the waters of a tributary of Buffalo Creek.

The dam broke on Feb. 26, a Saturday morning, and Craneco and Pardee and Lundale and almost everything else down the hollow to Man went with it. The [illegible]ns literally bumped into each [illegible]o hard that witnesses on [illegible]ground saw sparks

The sewing machines in the home economics room have been pushed against the wall to make room for the cots. By midweek, some of the victims have started moving out of Man High School.

The list will soon be gone from the trophy case, along wit the optimistic, 16 pages of "known survivors."

For miles up Buffalo Hollow, wood which once made houses, drifts in the black, still swift waters of the creek. On the banks are those sharp reminders of the

Deeper in the hollow, where Lundale used to be, heavy equipment is still working on the road. A construction man in a new and clean pickup truck is fascinated by what he saw at Lundale: a church on the railroad tracks with the tracks running out the front door.

Up the hollow from Accoville, there is Braeholm, closer to the wild water, but most of the residents there heeded a radio warning and took the high ground. "They used to call it Buryhome."

"By God, it's buried now."

passed and his house unbolted and sitting on the roadside, wants to know what to do about his house. It is worth $12,000, he said. It is cleaned up now and if he could get moved he could live in it.

He thinks it is the Health Department which must tell him what he wants to know but he says that nobody will tell him what he wants to know.

There is talk that the houses all jumbled there together will be torn up or burned.

Clark and the other men [illegible]

carpet wasn't even hurt, he says.

A relative of Garland Clark's came by Friday night, a rainy night, and said the water was close to the top of the dam. Gar-
